# FitBuddy — Phase 6: Project Testing

Test plan and evidence checklist

## Purpose

• Prepared from the supplied FitBuddy project document. This document is a submission-ready phase artifact/template; it does not claim that implementation, testing, screenshots, or deployment have been completed unless you add evidence from your actual project.

## Testing Scope

• Functional testing of forms and routes.

• AI output testing for workout and nutrition generation.

• Feedback/update testing.

• Database persistence testing.

• Admin-view testing.

• API endpoint testing using FastAPI /docs.

• Local deployment/browser testing.

• Responsive UI testing.

## Test Cases

• TC-01: Open / and verify the input form is displayed.

• TC-02: Submit valid user details and verify a 7-day plan is generated.

• TC-03: Verify the generated plan contains day-wise workout information.

• TC-04: Verify a nutrition/recovery tip is displayed.

• TC-05: Submit valid feedback and verify an updated plan is generated.

• TC-06: Verify original and updated plans are preserved in the database.

• TC-07: Open /view-all-users and verify stored users/plans are displayed.

• TC-08: Open /docs and verify available API routes can be explored/tested.

• TC-09: Restart the local server and verify stored database records remain available.

• TC-10: Test the interface at a narrow/mobile browser width.

• TC-11: Verify the application handles missing/invalid form input appropriately.

• TC-12: Verify no API key or secret appears in GitHub source.

## Test Evidence Table

Add columns in your final version for: Test ID, Input, Expected Result, Actual Result, Pass/Fail, Screenshot Name. Only mark a test as Pass after you have actually run it.

## Defect Tracking

Record any error, date found, affected component, reproduction steps, fix, retest result, and responsible member. Do not claim zero defects unless you have actually tested the application.

## Final Testing Checklist

- All core routes tested.
- AI generation tested.
- Feedback loop tested.
- Database tested.
- Admin view tested.
- Browser/UI tested.
- API docs tested.
- Secrets checked before public GitHub submission.
