FitBuddy — Phase 7: Project Documentation

Final project report structure and documentation checklist

Purpose

• Prepared from the supplied FitBuddy project document. This document is a submission-ready phase artifact/template; it does not claim that implementation, testing, screenshots, or deployment have been completed unless you add evidence from your actual project.

Recommended README Sections

• Project title and short description.

• Problem statement and objective.

• Features.

• Technology stack.

• System architecture.

• Project folder structure.

• Installation prerequisites.

• Environment/API-key configuration.

• How to run the application.

• Available routes/endpoints.

• How to test.

• Database information.

• Screenshots.

• Team members and responsibilities.

• Known limitations and future improvements.

Project Objective

Build a web-based AI fitness-plan generator that uses user details and fitness goals to generate a personalized 7-day workout plan, provide a nutrition/recovery tip, and update the plan from user feedback.

Technology Stack

• Frontend: HTML, CSS, Jinja2.

• Backend: Python, FastAPI, Uvicorn.

• AI: Google Gemini models as specified in the supplied project document.

• Database: SQLite with SQLAlchemy.

• Version control: Git and GitHub.

User Flow

Enter details → Generate Plan → View 7-day workout + nutrition/recovery tip → Submit feedback → Receive updated plan → Admin can view stored user and plan information.

Limitations / Safety Documentation

Because FitBuddy concerns exercise and nutrition, the application should be documented as an informational/educational tool rather than a substitute for qualified medical or fitness advice. The project document itself describes generated tips and plans but does not provide a medical validation framework.

Documentation Evidence

- Add screenshots of the homepage.
- Add screenshots of a generated plan.
- Add screenshot of feedback/update flow.
- Add screenshot of admin view.
- Add screenshot of /docs.
- Add GitHub repository link.
- Add actual test results.
- Add demo video link if required by your college.
