FitBuddy — Phase 8: Project Demonstration

Demo flow, speaking points and evidence checklist

Purpose

• Prepared from the supplied FitBuddy project document. This document is a submission-ready phase artifact/template; it does not claim that implementation, testing, screenshots, or deployment have been completed unless you add evidence from your actual project.

Recommended Demo Order

• 1. Introduce FitBuddy and its objective.

• 2. Show the public GitHub repository and eight phase folders.

• 3. Start the FastAPI application locally.

• 4. Open the homepage.

• 5. Enter a sample user profile.

• 6. Generate and show the personalized 7-day plan.

• 7. Show the nutrition/recovery tip.

• 8. Submit feedback requesting a change.

• 9. Show the updated plan.

• 10. Open the admin/all-users page and show stored records.

• 11. Open /docs and show the API documentation.

• 12. Briefly explain the architecture and technology stack.

• 13. Conclude with the project's main outcome.

Demo Talking Points

FitBuddy uses a FastAPI backend, Jinja2-based frontend, Gemini-powered generation, and SQLite/SQLAlchemy persistence. The distinctive workflow is the feedback loop: the user can submit feedback and the system uses the existing plan plus that feedback to generate a revised plan.

Demo Evidence Checklist

• Working homepage screenshot.

• Generated-plan screenshot.

• Feedback screenshot.

• Updated-plan screenshot.

• Admin-view screenshot.

• API docs screenshot.

• GitHub repository screenshot.

• Demo video file/link, if required.

Important Before Submission

Replace every placeholder/evidence item with your actual project evidence. Do not submit screenshots or test results that were not produced by your own running FitBuddy application.
